Professional Summary

Java Backend Developer at Oracle with 3+ years designing and scaling **microservices** using **Java 8, Spring Boot, and RESTful APIs** on **Oracle Cloud Infrastructure (OCI)**, supporting financial pipelines processing **10M+ records/day**. Reduced SQL query latency by **60%** via composite indexing and cut API response time by ~40% across **15+ production endpoints**. Applies **SOLID principles, Factory/Builder design patterns, and multithreading** for clean, high-concurrency backend systems backed by JUnit/Mockito at **90%+ coverage** in Jenkins CI/CD. Collaborates across QA, DevOps, and Product in **Agile/Scrum** environments with hands-on experience in **event-driven architecture (Kafka), circuit breaker patterns, Redis caching, and cloud-native deployments on OCI**. Solved **400+ LeetCode problems**, actively building **DSA and system design** depth targeting backend engineering roles at product companies.

Technical Skills

Languages	:	Java 8/11/17 (Core, Streams, Multithreading), JavaScript, Python
Backend	:	Spring Boot, Spring MVC, Spring Security, JPA/Hibernate, RESTful APIs, Design Patterns, Redis
AI/GenAI	:	RAG, LLMs, Spring AI, Ollama, Vector Embeddings, Vector Databases, pgvector, Prompt Engineering
Frontend	:	React, HTML, CSS
Messaging/ Databases	:	Apache Kafka, Oracle SQL (Indexing, Query Optimization), MySQL, PostgreSQL, MongoDB
Cloud & DevOps	:	Oracle Cloud Infrastructure (OCI), Docker, Kubernetes, Jenkins, Git, GitHub Actions, CI/CD Pipelines
Testing & Tools	:	JMeter, JUnit 5, Mockito, Integration Testing, SonarCloud, Swagger, IntelliJ, Postman
Practices	:	Agile/Scrum, System Design, Microservices Architecture

Work Experience

Software Developer | Oracle, Bangalore | Jun 2023 – Present

- Engineered backend microservices for Oracle's **AFCS (DAMS module)** using Java, Spring Boot, processing **10M+ financial records** and supporting **50K+ records per request** serving **10+ enterprise banking clients**.
- Designed, built, and maintained **15+ REST APIs & optimized Oracle SQL queries**, **reducing latency by ~40%** and improving query performance by **~60%** on datasets exceeding **2M+ records, slashing financial report generation time from 45 minutes to 15-20 minutes for customers.**
- Built scalable **validation & approval workflows (Maker-Checker, 4-level hierarchy)** applying the Factory design pattern and SOLID principles and Kafka-based pipelines, ensuring high-throughput, secure financial data processing.
- Resolved **200+ defects and contributed to 15+ production enhancements** in an Agile/Scrum environment. Automated CI/CD pipelines on OCI using Jenkins, Docker, and Kubernetes while managing production support and incident triage.
- Performed rigorous code reviews, enforcing SOLID principles and design patterns to improve system reliability.

Java Backend Developer Intern | Turtlemint, Pune | Jan 2023 – Jun 2023

- Developed Java/Spring Boot integration services to consume, normalize, and expose insurance-plan data from **10+ external insurer APIs**, exposing resilient REST interfaces with **rate limiting and fault-tolerant** processing backed by **MongoDB**.
- Implemented **GraphQL, gRPC** with **Redis caching** for frequently accessed insurance plan and user data, reducing repeated database/API calls and improving response latency and backend scalability across services.
- Improved service **high availability and scalability** through caching, resilient API integrations, and distributed communication patterns, while maintaining code quality.

Projects

Template Configuration Automation – DAMS (Oracle AFCS)

- Developed a **self-service configuration platform** using **Java, Spring Boot, REST APIs, Oracle SQL**, replacing manual SOP-driven configuration for financial adjustments.
- Designed **user defined attribute mapping and validation service**, enabling adjustment template creation and supporting **100+ journal requests** with up to **50K records each**.
- Leveraged **Oracle Cloud Identity (IDCS/OCI IAM)** and **OCI Object Storage** to build a secure, cloud-native template management solution with role-based access (Template/DAR), reducing manual configuration effort **by ~60%** and improving customer onboarding efficiency.

E-commerce Migration (Monolith → Microservices) | Spring Boot, JWT, AI, Kafka, SLF4j, Junit Demo Backend

- **Benchmarked and performance-tested** the platform using **JMeter**, validating **100 concurrent users and 1,000 API requests**, achieving ~**48.7 requests/sec** throughput, **46.7 ms average latency**, and **218 ms p99 latency** to identify API scalability bottlenecks.
- **Architected and migrated** a monolithic e-commerce platform into **4 independently deployable microservices**—User, Product, Order, and Payment—using Spring Boot, Eureka, OpenFeign, API Gateway, and **JWT**, improving scalability by ~40% and reliability using JUnit, Mockito, SonarCloud, and SLF4J, achieving **90%+ test coverage**.
- Shipped an **AI-powered RAG pipeline** using **Spring AI, Ollama, PostgreSQL/pgvector, and semantic search**, alongside a **React/JavaScript frontend**.
- Engineered an **event-driven Kafka architecture** with partitioned topics, consumer groups, manual offsets, retries, idempotent processing, at-least-once delivery, and **Dead Letter Topics,** reducing synchronous service dependencies by ~60%.

Achievement & Certifications

- GATE 2023 Qualified - AIR 8295 | Container & Kubernetes Essentials — IBM | Java Programming — Duke University

Education

Bachelor's in information technology | CGPA: 9.63/10 | VIIT, Pune | Jun 2019 - May 2023
HSC | Percentage: 84.6% | Manere High School & Jr. College, Kolhapur | Aug 2017 - Jun 2019
